

KÖSTER Restoration Plasters

KÖSTER restoration plasters are especially designed for the restoration of masonry with high salt and moisture contents. They are also not affected by high salt contents and prevent salts from diffusing to the surface. When rising damp is stopped with KÖSTER Crisin 76, KÖSTER restoration plasters help to dry out the wall and absorb remaining salts.

Priming with

KÖSTER Restoration Plaster Key

Application of the
KÖSTER Restoration Plaster

Smoothing the surface

KÖSTER restoration plasters are available in grey or white. In historic buildings they can be used as a decorative plaster even without painting. They are suitable for interior and exterior use.

KÖSTER

KÖSTER Crisin 76

The horizontal barrier for the masonry

Horizontal barriers even in cases of
high salt and moisture contents

Patented, pressureless system –
no loss of material in cracks or voids

System for the restoration of
masonry together with
KÖSTER restoration plasters

// Application

Key features of KÖSTER Crisin 76 at a glance:

- Suitable even in cases of high moisture contents $\leq 95\%$
- Suitable even in cases of high salt contents and suitable for most types of salts (sulfates, nitrates, chlorides)
- Solvent free
- The treated substrate does not have to be alkaline for the material to react
- No prior or subsequent drying of the wall necessary, even in case of high moisture contents
- Can not be diluted with water / is not water soluble
- Resistant against most ordinary aggressive substances that are encountered in masonry such as acids, alkalis and salts
- Fast reaction, immediately effective
- Not bio-degradable
- Does not cause or promote corrosion of steel reinforcements
- Low density (0.91 g/cm^3); penetrates deeply even into the smallest capillaries of the construction material
- The cured material is elastic
- Does not dissolve any salts
- Proven to be effective for more than 30 years

Horizontal drilling in the bed joint

Installation of the KÖSTER Capillary Rods and KÖSTER Suction Angles

Installation of the cartridges

Automatic installation of the horizontal barrier

The advantages of the Suction Angle System:

- Can be applied to perforated brick and cracked or hollow masonry without having to fill the voids beforehand
- no subsequent injections required,
- one-time installation, success guaranteed
- Easy installation, horizontal drilling
